Safer roads start with smarter trucks.

The upgraded Bendix Wingman Fusion driver assistance technology integrates radar, camera and brake system data to help drivers detect and avoid potential hazards.

MackTrucks.com
THE NEXT GENERATION OF BENDIX® WINGMAN® FUSION™ IS NOW AVAILABLE ON MACK GRANITE® MODELS.

AUTOMATIC EMERGENCY BRAKING (AEB) UPGRADES

FOLLOWING DISTANCE ALERTS
After detecting stationary and slow-moving vehicles, three levels of notifications alert the driver of the decreasing following distance before automatically applying the brakes to help prevent a collision.

INCREASED AEB SPEED REDUCTION
New detection feature upgrades have increased the capability of Wingman Fusion to reduce traveling speeds by up to 50 mph to help avoid a collision.

MULTI-LANE AEB
When AEB is active and the driver attempts to change lanes, the system will continue to brake if it detects a slowing or stopped vehicle in the adjacent lane.

LANE DEPARTURES AND DETECTION UPGRADES

LANE DEPARTURE WARNING
Wingman Fusion’s windshield-mounted camera warns the driver when the truck begins drifting out of its lane.

ALERT PRIORITIZATION
If multiple alerts are needed simultaneously, Wingman Fusion arranges them in order of importance and delivers only the most crucial alert to minimize potential distraction.

When Bendix Wingman Fusion can definitively identify the large, stationary object as a vehicle, the system will alert the driver with 3.5 seconds notice. Then, if necessary, it will automatically apply the brakes.

Above 37 mph, when an unintended lane departure is detected, the system alerts the driver.
